ANALYSIS OF THE STATUS AND RECOMMENDATION FOR THE SOLAR PONDS REMEDIATION PROGRAM - RLB-0710-92

Ref: J. K. Hartman ltr (11823) to R. L. Benedetti. Same Subject, October, 19, 1992

In accordance with DOE's request EG&G Rocky Flats, Inc. has analyzed the status of the entire Solar Ponds Remediation Program. On Friday November 6, 1992 EG&G Rocky Flats presented to DOE, RFO the results of this analysis and provided recommendations as to the appropriate course(s) of action to follow for meeting program objectives regarding with the commitments (date and scope of work) contained in the IAG, AIP, and IM/IRA.

The analysis considered viable options for meeting program objectives based on the current status of the program. The options objectively assessed the aspects of the program in the areas of regulatory compliance, risks to successful completion of the program, cost, schedule, technical feasibility, waste storage and disposal. These aspects were compared with existing commitments to regulatory agencies.

Additionally, the presentation stated the assumptions under which the analysis was conducted, stated the options considered, and detailed the comparisons for each option in each of the analyzed areas. Finally, the presentation provided DOE, RFO with the preferred option for meeting program objectives regarding regulatory commitments.

If you have any questions or require additional information please contact E. M. Lee of my staff on 966-8648.
